Case History

*When electrical hazards were present and wastewater could not be managed, **EAGLE** used dry ice to efficiently remove residue and general grit while saving the customer money by eliminating wastewater treatment and electrical maintenance.*

For applications which require a cleaning process in settings where time-consuming disassembly would be inconvenient and expensive, **EAGLE** uses dry ice blasting, which is a non-abrasive, nonflammable and nonconductive cleaning method.

It is environmentally-friendly and contains no secondary contaminants such as solvents or grit media.

Dry Ice Blasting is approved for, and well- suited for, use in the food, agriculture, and general industries. Items can be cleaned in place, without damaging active electrical and mechanical parts or creating fire hazards. Dry ice blasting can also be used to remove production residues, release agents, contaminants, paints, oils and biofilms.

It is a versatile cleaning method that can be as gentle as removing smoke damage from books or as aggressive as removing weld slag from tooling.

EAGLE SERVICES CORP provides industrial / environmental clean up services, 24 / 7 / 365, to process industries in the Midwest and planned clean up services from coast to coast.
