Case History

A closed refinery had 8 miles of contaminated process sewers which needed to be cleaned and video inspected after the cleaning to document that they were free of contamination.

The debris was removed from the sewers utilizing sewer rodding and vacuum equipment. It was then transported to an on site processing area where the debris was filter pressed to separate oils, solids, and water. The oil was recovered and recycled, the solids packaged for disposal and the water cleaned so that it met the owner's NPDES permit.

EAGLE documented the sewer cleaning with video inspection, and a library of tapes along with a 2000 page final report were submitted to the owner. The project was completed on time and 20% under budget.

EAGLE SERVICES CORP provides industrial / environmental clean up services, 24 / 7 / 365, to process industries in the Midwest and planned clean up services from coast to coast.
