## Case History

*A steam turbine in a powerhouse needed mineral deposits removed from the blades.*

The turbine was 400' away from any available parking areas. **EAGLE** placed a 40,000 psi portable intensifier next to the steam turbine to minimize pressure loss which would have very negatively impacted the cleaning process.

With the ultra high pressure water being generated in proximity to the steam turbine, **EAGLE** was able to maintain the pressure needed to strip the deposits from the steam turbine, successfully removing 100% of the deposits in a timely fashion.

**EAGLE SERVICES CORP** provides industrial / environmental clean up services, 24 / 7 / 365, to process industries in the Midwest and planned clean up services from coast to coast.
