ULTRA HIGH PRESSURE WATER CUTTING FOR HYDRO DEMOLITION OF COKE PLANT DECANTERS

An integrated steel mill in Gary, IN shut down their coke plant and needed to conduct a full decontamination and deconstruction of the plant. The coke decanters were still full of coke tar and other hazardous and flammable material. Seeing as the material had become hard over time and there were no accessible manways, the mill was left with a big problem on their hands.

Eagle Services employed a 40,000 PSI hydro blaster with a spark proof garnet injection system to perform "cold cuts" into the tank. Eagle then used large bobcats to drive into the tank to remove the material as well as air movers to suck out residual material. The mill was back on schedule to demolish the plant in their projected time.
